Are home solar panels useful

Overview

The pros of using solar panels include a lower carbon footprint, lower electric bills, potentially higher home value and tax credits. The cons include high initial costs, specific roof requirements, possible higher property. Solar projects are making it easier for Americans to choose solar energy to power their homes. With current tax credits and incentives, the average payback period for solar panels is between six and 10 years. In other words, you can recoup the money. Net Metering Changes Affecting New Installations: Several states have reduced net metering compensation rates, impacting the economics of new solar installations and making system sizing and battery storage considerations more critical for maximizing returns.
