

PEES Power Systems

Balcony photovoltaic system does not need energy storage

Overview

No energy storage : Balcony solar systems are usually designed for self-consumption and do not have an energy storage. This means that excess energy cannot be stored and is not available during power outages. Balcony solar (also known as “plug-in solar”) consists of 1-3 portable, lightweight panels that attach to a balcony railing, patio, or fence. Unlike traditional solar, these systems: Plug into a standard 120V wall outlet using a specialized microinverter. The requirements are very simple - all you need is two to four square meters of sunny space and an outdoor socket and you're ready to go! As Austria's pioneers in solar power. While conventional mini-solar systems feed their generated electricity directly into the house's electrical grid, an off-grid system functions completely independently without a grid connection. frequently asked Questions What can I. People are not going to meet all their electrical energy needs that way, but they can generate some of their own electricity, which opens the door to the democratization of our energy supply — an important break from the traditional model in which every electron is purchased from a central utility.

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW 115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled
