Brussels demand response

Overview

The demand response mechanism enables major industrial enterprises to be compensated when the TSO (ADMIE/IPTO) requests that they shift their energy usage by lowering or stopping consumption during high-demand peak hours so as to balance the electricity system's needs. On 7 March 2025, ACER submitted its proposal for a new EU-wide network code on demand response to the European Commission. What is demand response?

Demand response is when consumers (retail and industrial). The European Commission has unofficially approved a Greek government request for an extension of the country's demand response mechanism (interruptability), following negotiations, energypress sources have informed. This industrial demand is exploited at the system-operator level for adequacy and balancing purposes. The scientific output expressed does not imply a policy position of the.

Brussels demand response

From Code to Action: Recommendations for a stronger Network Code ...
