# Can all-vanadium liquid flow batteries still be pursued

## Overview

---

Most commercial flow batteries today are vanadium-based, but newer chemistries, including organic, iron, and zinc variants, are gaining traction due to lower cost and reduced environmental risk. Over the past decade, efforts to achieve carbon-neutral operations have emphasized renewable and sustainable energy sources. These sources, however, often produce power inconsistently, making it challenging to integrate them into existing energy grids. Energy storage systems are used to regulate. This technology strategy assessment on flow batteries, released as part of the Long-Duration Storage Shot, contains the findings from the Storage Innovations (SI) 2030 strategic initiative. VRFBs stand out in the energy storage sector due to their unique.
