# Can solar panels generally reach their rated power

## Overview

---

Solar panels rarely deliver their full rated wattage. Tested under ideal Standard Test Conditions (STC), real-world factors like heat, angle, and atmosphere reduce output. Expect 60%-75% efficiency in normal use, meaning a 100W panel may produce 60-75W in the field. 8 kW per hour of electricity (4. But, after monitoring your solar system, you'll most likely find that. Due to these factors, you can expect a solar panel to operate at about 60% to 75% of its rated capacity under real-world conditions. Here are some of the newest models: Maximum Power Ratings show the most power a panel can make in perfect test settings.
