Can solar power generation be built on the roof

Overview

Solar Roof is a building-integrated photovoltaic (BIPV) system that incorporates photovoltaic (PV) tiles as roof coverings to generate on-site electricity for the building. Solar Roof utilizes visually indistinguishable power producing and non-power producing tiles. In a perfect world, the average roof in the U. can generate around 21,840 kilowatt-hours (kWh) of solar electricity annually—that's more than most homes need. But also, the world isn't perfect. Realistically, your roof's solar generation potential will be less than that. Industry projections suggest potential for 1 in 7 homes to have solar by 2030, driven by. The process of designing and planning the positioning of solar panels on a rooftop is called solar rooftop design. By embedding solar technology into shingles or tiles, BIPV eliminates many drawbacks of traditional systems.
