

PEES Power Systems

Containerized generator appearance

Overview

Containerized generators are designed according to ISO container standards, ensuring compatibility with global transportation systems. Units below 1250kVA typically adopt a 20ft container, while those above 1250kVA use a 40ft container. The larger footprint of these units allows for more versatility from a manufacturing specification standpoint — we can easily equip your gen set with greater levels of sound. Factory pre-integrated and customizable per site requirements, the new Cummins Power Generation Containerized Series generator sets can provide significantly shortened lead time for installation, and a lower cost of ownership via a flexible design. We custom build to our customers specifications up to 3MW. Our team delivers superior quality, always. These generators are widely used in industries where standby or mobile power is critical. Containerized diesel generator sets, also known as container-type generator sets or container diesel generators, are integrated power solutions that enclose a diesel engine, alternator, control panel, fuel tank, and cooling system within a standard shipping container.
