Do base stations in the north use lithium batteries for communication

Overview

Telecom batteries for base stations are backup power systems using valve-regulated lead-acid (VRLA) or lithium-ion batteries. They ensure uninterrupted connectivity during grid failures by storing energy and discharging it when needed. This article clarifies what communication batteries truly mean in the context of telecom base stations, why these applications have unique requirements, and which battery technologies are suitable for reliable operations. As a telecom lithium battery supplier, I am excited to explore this topic and share my insights. They are also frequently used.
