Does the folding chair rely on a portable power source

Overview

Powered folding wheelchairs: These types of wheelchairs use batteries as their power source and are usually equipped with electric motors. Users can easily control them through a controller or remote control. There are significant differences in design, functionality, and use between a electric fold up wheelchair and a regular wheelchair. One-Touch Folding Design: Folds and unfolds in seconds with no tools required; compact size fits in most car. Clear Definition: A "Portable Power Chair" refers to an electric wheelchair/mobility scooter designed with the core objective of being easily disassembled, relatively lightweight, foldable or compactly stowed, and capable of being placed into a standard car trunk or taken onto public transportation. The lock release button allows for quick and easy folding in one simple motion. Folds in less than three seconds. 7 mph speed, and stability on 10° inclines.

Does the folding chair rely on a portable power source
