Powering Canberra: Our Pathway to Electrification

The ACT is preparing to electrify our city and transition away from the use of fossil-fuel gas by 2045. Make your next choice electric for your home or business. Access programs and resources from the ...

Australia: Canberra's journey to 100% renewables

This energy did not flow to Canberra directly, but simply went into the national grid to offset the ACT's former reliance on coal-powered electricity.

51.2V 150AH, 7.68KWH

Make your next choice electric , Our pathway to electrification

An all-electric home can help the average Canberra household to save hundreds every year on energy bills. Households with solar panels, battery storage and electric vehicles can save even more. Many ...

Canberra Microgrid & Solar Battery Push

Explore Canberra's bold microgrid and solar battery push -- community and grid-scale storage, peak demand reduction and renewable energy solutions with expert solar support.

New Integrated Energy Plan to help electrify Canberra

The ACT Government is releasing new Integrated Energy Plan (IEP) as part of its investment in an all-electric, zero-emissions future for Canberra. The plan includes a range of ...

ACT switches on first grid-scale battery

As we transition away from fossil fuels, demand for electricity is going to increase." "We are committed to investing in sustainable energy infrastructure of the future to maintain a stable and ...

Solar

Home Electrification in Canberra: Why It's the Next Big Shift

With visionary grants, cutting-edge vehicle-to-grid technology, and bold infrastructure investments, home electrification in Canberra is entering its most transformative phase.

Energy in the Australian Capital Territory

Overview Renewable power supply targets Solar power Thermal Power Other sources of electricity

Energy produced in the Australian Capital Territory mainly consists of solar electricity. Electricity consumed in the Australian Capital Territory mainly comes from the national power grid through substations at Holt and Fyshwick (via Queanbeyan). The ACT currently mandates that 100 percent of its electricity, will be supplied from renewable sources by 2020. The ACT has five solar farms capable of generating about 56.3 me...

Canberra's Electrification Pathway

We will be the first Australian city to reach net zero emissions and 100% renewable energy. This will bring economic opportunities and savings to

households and businesses as they swap from fossil ...

Another 'big battery' joins the ACT's electricity network

It's part of the ACT Government's 'Big Canberra Battery Project', an effort to build an "ecosystem of batteries across the ACT to ensure that our electricity grid remains stable". At the top ...

Energy in the Australian Capital Territory

Electricity consumed in the Australian Capital Territory mainly comes from the national power grid through substations at Holt and Fyshwick (via Queanbeyan). [1]
