Free solar power generation on rooftops

Overview

The federal government does not provide free solar panels, but many states and utilities offer incentives that can reduce the cost of going solar. You can install solar panels on your roof with no upfront cost by signing a lease or PPA or taking out a \$0-down loan. The ITC — also known as the Federal Solar Tax Credit — is a popular tax rebate program offered by the US Federal. We use Google Earth imagery to analyze your roof shape and local weather patterns to create a personalized solar plan. Adjust your electric bill to fine-tune your savings estimate and the recommended number of solar panels for your home. As we enter 2025, technological advances, improved financing options, and strong federal incentives have made rooftop solar more. Solar rooftop potential for the entire country is the number of rooftops that would be suitable for solar power, depending on size, shading, direction, and location. Rooftop potential is not equivalent to the economic or market potential for rooftop solar—it doesn't consider availability or cost.
