Overview

The spherical sun power generator prototype Rawlemon created is called the "beta. This generator will combine spherical geometry principles with a dual axis sun tracking system. The glass sphere is used to concentrate diffused sunlight into a small surface of tiny solar. The company claims these spheres could achieve 60 times more energy output than solar panels in natural or artificial light. The widespread adoption of solar panels still faces myriad challenges. Urban areas struggle with space constraints for large panels. Unlike being flat or thin like other PV panels, this one is a giant. A German architect with a clear artistic flair has applied his incredible talent to the creation of a crystal ball that generates power. BARCELONA — Looking into a glass ball has always meant looking into the future, speculating, daring to be visionary.
