How long does it take to pay for rooftop solar panels

Overview

Most solar panels pay off in seven to 12 years. Geographic location, government incentives and your household's electricity usage impact how quickly your solar investment will break even. However, in some states, the payback period can be as short as five years or as long as 15. Maximize your solar panel savings by choosing the right installer, optimizing panel placement and improving. Regional Payback Variations Are Extreme: Solar break-even periods range from just 2.4 years in Hawaii to nearly 20 years in Utah, primarily driven by local electricity rates and state incentives. The amount of time it takes for the energy savings to exceed the cost of installing solar panels is known as the payback period or break-even period.
