

## PEES Power Systems

# How many photovoltaic panels should each household install

## Overview

---

While it varies from home to home, US households typically need between 10 and 20 solar panels to fully offset how much electricity they use throughout the year. The goal of most solar projects is to offset your electric bill 100%, so your solar system is sized to fit your average. Even if your houses look identical from the street, your neighbor might need 18 panels while you need 22. Your electricity usage, roof space, and location all play starring roles in this calculation. If you're consuming 1,000 kWh per month in a sunny state like California, you might need just 16 panels, while the same. How many solar panels power a house?

A: There are plenty of incentives and advantages of solar energy for those who switch from a traditional utility system to a solar-powered one. It comes down to the amount of energy your household consumes, which in turn depends on things like the number of people living in your home, the number of appliances you have and how often.
