How many watts does the Ninebot charging inverter have

Overview

The Segway Ninebot Max scooter has a charger that puts out 122 watts (2.9 amps @ 42V) as per the specs. 80 = 153 watts draw from AC plug. I tried a 75 watt version, and it worked SOME of the time. You plug in where I've circled. 80 = 153 watts draw fro. see more Short answer: No, the charge rate (153W) is too high & the Ninebot battery (550 Wh) is too. The Ninebot scooters, including models like Ninebot Max and Ninebot Kickscooter, feature unique battery and adapter needs that necessitate an understanding of compatibility to maintain performance and longevity. Choosing the right Ninebot charger not only involves matching the voltage and current. When I first came across the UL&CE Listed 42V/36V 1.7A Charger Power Adapter, I was immediately drawn to its impressive compatibility with a wide range of Segway Ninebot models.

How many watts does the Ninebot charging inverter have

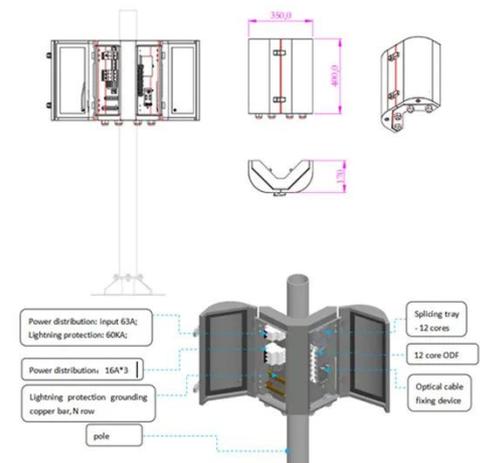

Understanding the Ninebot Electric Scooter Charger
