# How many years does a solar mount usually last

✓ 100KWH/215KWH

✓ LIQUID/AIR COOLING

✓ IP54/IP55

✓ BATTERY 6000 CYCLES

## Overview

---

### They're Built to Stick Around – But for How Long?

A well-made solar mounting system, especially one built from high-grade aluminum or stainless steel, can easily last 25 to 30 years, sometimes even longer. In most cases, they're designed to outlast the solar panels themselves. That said, the real. But one question many property owners and installers ask is: how long do rail-less solar mounts actually last?

This guide explores their expected lifespan, the key factors that affect durability, and how to maintain them for decades of reliable service. Generally speaking, most well-designed and properly installed. Most are backed by 25- to 30-year performance warranties, and in real-world conditions, many keep producing power well beyond that. But lifespan isn't just about whether a panel still functions; it's about whether it's still delivering the return you expect.
