# How outdoor solar panels generate electricity

## Overview

---

At a high level, solar panels are made up of solar cells, which absorb sunlight. They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect. Below, you can find resources and information on the. Solar PV panels are often described as "turning sunlight into electricity," but for many homeowners and first-time solar users, that explanation feels too simple. Some PV cells can convert artificial light into electricity. So far, we're only capturing a tiny fraction of the sun's immense power potential, but that's changing.
