# How to heat water with solar photovoltaic panels

## Overview

---

Solar panels can be used to heat water by converting sunlight into thermal energy, reducing your reliance on traditional heating methods. There are two main types of solar water heating systems: active (with pumps) and passive (without pumps). Can You Use Solar Panels to Heat Water?

Yes, solar panels can be used to heat water through a. Using solar collectors to directly heat water using the sun's power is a green way to meet your demand, but the technology may not suit all homes. Although we think of solar energy as primarily a way of generating electricity, solar water heating is an alternative use of the sun's energy, using the. However, if you use excess solar power to produce hot water, less electricity goes into the grid and you can increase your self-consumption to around 70%. This way, you can completely switch off your heating system, which only provides hot water in summer, and also save money with the power of the. Solar water heaters come in a wide variety of designs, all including a collector and storage tank, and all using the sun's thermal energy to heat water. In this article, we will explore the benefits.
