How to split the solar photovoltaic panels

Overview

To effectively split solar photovoltaic panels requires precise techniques tailored to specific panel types and configurations. It is crucial to comprehend the types of panels involved, as different. I'm trying to split the solar panel output. Basically I have x4 100 Watt panels and want them to go to both an Ecoflow (directly connected), and a charge controller which will connect to a battery array. 5V cell and connect them in series to get a voltage output of 1V. This is similar to having a 9KW array split between two 60A controllers. To split the solar. There are two primary reasons, one to boost voltage with a limited number of cells or area and the second is if you have broken cells and you wish to cut the broken side off and still make use of the undamaged side.
