Lithium battery energy storage power station cooling system

Overview

In short, high-density liquid cooling BESS technology allows you to build more capacity with less physical infrastructure. It turns thermal management from a cost center into a value driver that slashes upfront capital expenditure. It is because liquid cooling enables cells to have a more uniform temperature throughout the system whilst using less input energy, stopping overheating, maintaining safety, minimising degradation and. The transition to electric vehicles has accelerated dramatically, placing unprecedented demands on lithium-ion battery systems. During charging and discharging, how to enhance the rapid and uniform heat dissipation of power batteries has become a hotspot. Every watt used to cool a battery is a watt not sold to the grid.
