# Male Super Electrolytic Capacitor

## Overview

---

A supercapacitor is a special type of electrolytic capacitor that offers particularly high electric capacity (up to several thousands farads) with operating voltage at the level of 2-3V. Supercapacitors are breakthrough energy storage and delivery devices that offer millions of times more capacitance. Supercapacitors are used in applications requiring many rapid charge/discharge cycles, rather than long-term compact energy storage: in automobiles, buses, trains, cranes, and elevators they are used for regenerative braking, short-term energy storage, or burst-mode power delivery. [3] Smaller. Electric double-layer capacitors (EDLC), or supercapacitors, offer a complementary technology to batteries. They can be recharged very quickly and are used primarily for energy storage.

Overview History Background Design Styles Types Materials Electrical parameters

In the early 1950s, General Electric engineers began experimenting with porous carbon electrodes in the design of capacitors, from the design of fuel cells and rechargeable batteries. Activated charcoal is an electrical conductor that is an extremely porous "spongy" form of carbon with a high specific surface area. In 1957 H. Becker developed a "Low voltage electrolytic capacitor with porous carbon electrodes". He believed tha...

## Supercapacitor

This design gave a capacitor with a capacitance on the order of one farad, significantly higher than electrolytic capacitors of the same dimensions. This basic mechanical design remains the basis of most ...

## Supercapacitors: How They Store Energy and Deliver Instant Power

Super-capacitors are constructed from two electrodes, an electrolyte and an electrolyte separator that allows the transfer of ions, while providing insulation between the electrodes.

## CDE Supercapacitor Technical guide

The life expectancy of supercapacitors is similar to aluminum electrolytic capacitors. The life of supercapacitors will double for every 10°C decrease in temperature or voltage by 0.1V.
