Mexico quality energy storage battery model

Overview

The Mexican government announced in March 2025 a first-of-its-kind measure in the region: all solar and wind power plants must integrate battery systems equivalent to 30% of their installed capacity, with a minimum of three hours of discharge. Mexico's new regulation mandating battery systems for solar and wind projects positions it as a model for energy storage integration in Latin America, according to a new report. Electric energy storage has become a crucial component in the transition to more sustainable, reliable and efficient energy systems. In Mexico, this concept has taken on greater relevance. Battery Energy Storage Systems (BESS) have gained momentum in Mexico, with both the federal government and private companies ramping up plans to install several gigawatts of capacity over the coming years. These systems allow for electricity, whether surplus or not, to be stored and released during.
