Minimum operating temperature of solar container outdoor power

Overview

Most outdoor power systems, such as lithium-ion batteries or solar storage units, face performance drops below -20°C (-4°F). Material Contraction: Metals and plastics may crack or deform. Fluid Viscosity: Lubricants. Temperature Coefficient is Critical for Hot Climates: Solar panels with temperature coefficients of $-0.30\%/^{\circ}\text{C}$ or better (like SunPower Maxeon 3 at $-0.30\%/^{\circ}\text{C}$). In areas that can experience prolonged temperatures below 14°F (-10°C), Tesla recommends using the optional cold weather kit (Tesla P/N 1766691-xx-y) for optimal system. With the SOK 48 volt batteries I have, this is the temperature range between -5°F and 26°F . This is a temperature I am likely to encounter at least a few times a year if I'm able to use the property in the winter. I'm afraid I only just realized that I may have a separate issue to worry about with. What temperature should a solar panel operate at?

In real-world conditions, solar panels typically operate $20-40^{\circ}\text{C}$ above ambient air temperature, meaning a 30°C (86°F) day can result in panel temperatures reaching $50-70^{\circ}\text{C}$ ($122-158^{\circ}\text{F}$).
