# Mobile base station power system inspection

## Overview

---

**Scheduled Inspections:** Routine checks of battery condition, generator fuel levels, UPS performance, and overall system integration are essential.

**Performance Testing:** Simulated power outage drills help verify that the backup systems engage seamlessly. se stations and the radiation impact on the surrounding will become a non-important thing. In order to quickly and lightly develop the source code. Base station testing's main goal is to ensure that the base stations satisfy the necessary performance criteria, offer dependable coverage, and provide customers with high-quality communication services. Signal strength, coverage area, capacity, interference levels, call quality, data throughput. With the development of 5G mobile networks, the number of mobile communication base stations in China has increased rapidly, and regular inspection and maintenance are required.
