Netherlands electricity regulations

Overview

This act combines the regulations for the transport and supply of gas and electricity in the Netherlands into one law, with a focus on improved transparency, structure and consistency. It also incorporates the agreements from the Dutch Climate Agreement and new EU legislation. Dutch energy regulations are about to change in a big way, and for the first time, renewable energy producers will get priority grid access. The surprising part is that it is not only huge corporations that will benefit. Under the New Energy Act 2025, even small producers and households can connect. 1. The new act will enter into force on 1 January 2026. What will all this mean?

Below, I will give you the important changes in a nutshell. This system should meet society's needs, such as efficiency, safety, environmental protection, fair competition in energy markets and the reduction of greenhouse gas. Do your employees work with electricity?

Do they, for example, service electrical installations, batteries, or electronic machines?

You must keep to the Working Conditions Act (Arbowet) and work according to NEN standards.
