Nine planets without pluto

Overview

Irrespective of ongoing discussions about Pluto's status, our solar system is currently officially said to have eight planets. The Nine Planets is an encyclopedic overview with facts and information about mythology and current scientific knowledge of the planets, moons, and other objects in our solar system and beyond. The smallest and fastest planet, Mercury is the closest planet to the Sun and whips around it every 88. Hints of life found on distant planet Nikku Madhusudhan, a professor of astrophysics and exoplanetary science at the University of Cambridge, discusses the discovery of hints of life found on the distant planet K2-18b. Pluto was unseated as number nine in 2006. Now, a group of international researchers say they may have found a candidate — although nothing is certain. ' Surprisingly, this was later proven wrong by scientists.

Nine planets without pluto

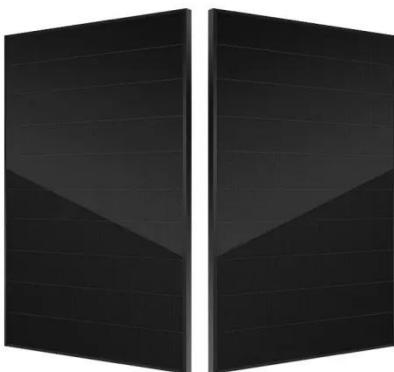

Could our solar system have 9 planets after all? Astronomers may ...

Our solar system may have a ninth planet after all, following the declassification of Pluto nearly two decades ago, researchers say.

From The Sun, Information, History & Definition

The planets in order from the Sun based on their distance are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Click for more.

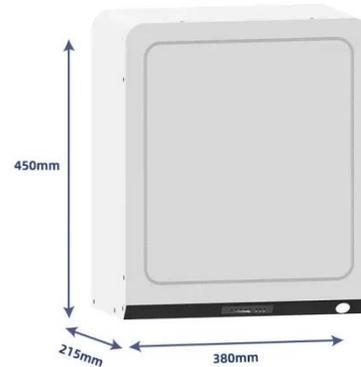

Dwarf Planets
