

PEES Power Systems

Oil platform using North Macedonian folding container single phase

Overview

ELPE plans to use its 350,000-metric ton storage facility, located 25 kilometers from the North Macedonian capital, as part of the export drive to regional markets. Initially, the pipeline's operations were suspended because alternative supply methods were more cost-effective at that time. However, today's circumstances seem favorable. Greek energy group Helleniq Energy, formerly known as Hellenic Petroleum (ELPE), is exploring the possibility of expanding its presence in the Balkans by adding more petrol stations to its network and is also looking to engage in various wholesale trading activities in African and Far East markets. Oil-based fuels power millions of automobiles, aircraft and ships around the world and are integral to modern life. But burning oil is also one of the leading sources of CO2 emissions. Efforts are underway to decarbonise sectors like transport that rely heavily on oil, but this is challenging in. Offshore platforms are massive structures designed to extract oil and gas from beneath the ocean floor. Built to withstand harsh marine conditions, they come in various types: fixed, floating, and subsea, each suited for different water depths and operational needs. Stay updated with the latest Crude Oil Price Today from major.
