

## PEES Power Systems

# Outdoor power supply smell

## Overview

---

An electrical burning smell detected outside a home is a serious alarm signal requiring immediate investigation and action. This acrid, chemical odor usually indicates that the plastic or rubber insulation protecting electrical wiring or components is overheating. The smell signifies excessive heat. Is it normal to smell a little burning inside of a power supply?

A power supply from a bit older pc smells like burning a bit, but it's still running the pc good somehow. Is it normal?

Is it ok to use?

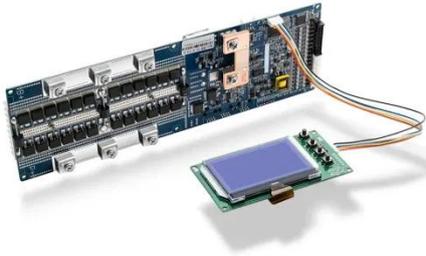

Is it gonna pop?

I'm just gonna replace this. Cheap knock off China brand psu go boom boom! Ha-ha No. Ignoring it could pose a severe safety risk, as it's often a precursor to an electrical fire. Is this common for a PSU straight from the factory?

I checked, and the box and cables don't have any bad smells, so I'm certain it's a new product. I've. Took PC apart to clean it up, sprayed some compressed air on PSU and cleaned fans with a brush. Put it back together and played games for a few hours, after leaving and entering the room I noticed a faint smell of burning plastic/electronic coming from the PSU. Is it failing or did I mess it up?
