Papua new guinea renewable energy growth

Overview

By 2030, the national government aims to increase electricity access to 70% of households by 2030, which would require adding about 300 MW of capacity to the national grid. about 60% of the population has access to off-grid solar options. [2] PNG is ranked as the tenth most. Papua New Guinea is making significant strides in improving its energy infrastructure, with a strong focus on renewable sources like solar power. The discovery of petroleum and natural gas reserves in the 1990s spurred economic growth, leading to increased oil and gas exports.

Papua new guinea renewable energy growth
