# Paramaribo climate change

## Overview

---

Explore the climate change data for Paramaribo, Suriname, showcasing the temperature, rainfall, and sunshine duration trends over the years. Suriname is highly vulnerable to the effects of climate change (e.g., mangroves), and the fact that 87% of the population, and most of the country's economic activity is. Suriname faces severe coastal erosion and rising sea levels, threatening communities along its vulnerable coastline. Houses are flooded, schools remain closed because classrooms are flooded and businesses cannot carry out their activities. Insufficient maintenance of. The Paris Agreement of 2015 sets out a global framework to limit global warming to well below 2°C, preferably to 1.5°C (degrees Celsius), compared to pre-industrial levels. To achieve this global temperature goal, countries aim to reduce growth of greenhouse gas emissions as soon as possible and. east of South America, where the ITCZ passes twice a year (southward and northward). Ozone sondes are released weekly since 1999 and form the base of a multiple linear regression (MLR) trend analysis that provides evidence of climate change in the Tropics.
