# Photovoltaic bracket height and small

## Overview

---

In general, an installation height of 1.5 meters above the ground is considered a good range for most residential and small - scale commercial installations. This height provides enough clearance for maintenance while also reducing the risk of damage from ground - level. The installation height of a photovoltaic bracket is a critical factor that significantly impacts the performance, efficiency, and overall viability of a solar power system. It is a crucial part of solar systems. If you're installing solar panels on a roof, the type of roof can also affect the installation angle.
