Overview

Recent findings from the Fraunhofer Institute for Solar Energy Systems in Germany reveal that integrating rooftop solar panels with battery storage and heat pumps not only boosts the efficiency of heat pumps but also lessens the dependence on electricity from the grid. For solar-plus-storage—the pairing of solar photovoltaic (PV) and energy storage technologies—NLR researchers study and quantify the economic and grid impacts of distributed and utility-scale systems. Much of NLR's current energy storage research is informing solar-plus-storage analysis. Sometimes two is better than one. Energy storage systems, on the other hand, store excess energy for later use, addressing the intermittent nature of renewable energy sources like solar power. And when the photovoltaic.
