Photovoltaic panel circuit principle diagram

Overview

Figure 1: Solar cell diagram illustrating the working principle based on the photovoltaic effect. Figure 1 shows a schematic layout of a p-n junction based solar cell. Here the n-region is heavily doped and the n-region is made thin so that maximum sun light can penetrate. Solar Cell Definition: A solar cell (also known as a photovoltaic cell) is an electrical device that transforms light energy directly into electrical energy using the photovoltaic effect. A photovoltaic (PV) cell generates an electron flow from the energy of sunlight using semiconductor materials, typically silicon. It provides a detailed overview of the various components and their interconnections, allowing for a better understanding of how solar energy is harnessed and utilized. Construction: Made of silicon with metal contacts and an anti-reflective coating.
