Photovoltaic panels facing south

Overview

In the Northern Hemisphere, solar panels should face true south for maximum annual energy production. This orientation provides optimal exposure to sunlight throughout the day and across all seasons. East-West Orientations Offer Strategic Value: While producing 75-85% of south-facing output, east and west-facing panels can provide superior financial returns by aligning with time-of-use electricity rates and matching typical household consumption patterns. However, factors such as roof slope and proximity to the equator may have some homeowners considering other directions (including north). In the United States, the most productive installation typically faces south to capture the sun across the year, but real-world results depend on tilt, shading, and roof. For homes in the northern hemisphere, south-facing solar panels do receive the most direct sunlight throughout the year. Now, even though that sounds easy, maybe self-explanatory, true north and true south. Photovoltaic (PV) roof panels most often face the direction that maximizes solar energy production for a given location, balancing orientation, tilt, shading and practical roof constraints.

Photovoltaic panels facing south

Solar Panel Orientation: Everything You Need to Know

The general rule for solar panel placement in the northern hemisphere is that solar panels should face true south (and in the southern, true north). This is usually the best direction ...

Best Roof Location for Solar Panels: South Facing Tilt and Shading

South-facing roofs provide the best annual output, with the potential for shading from surrounding trees. Consider a slightly steeper tilt to reduce snow buildup and to maximize panel ...

Does My Roof Have to Face South for Solar? , Home Solar 101

For homes in the northern hemisphere, south-facing solar panels do receive the most direct sunlight throughout the year. However, a south-facing roof is by no means a necessity for a productive and ...

This article explains why south-facing orientations are commonly preferred in the United States, how east/west or tilted arrays perform, and what factors influence final system design for ...

What's the Best Angle for Solar Panels? , EnergySage

For maximum output, the sweet spot for solar panels in the continental U.S. is facing roughly south and tilted between 15 and 40 degrees, according to the Department of Energy. That ...

Best Direction for Solar Panels , Trinity Solar

Find out which direction solar panels should face for maximum sunlight and energy savings. Learn how roof angle and orientation impact solar efficiency.

Solar Panel Direction & Orientation: 2025 Complete Guide

Yes, east and west-facing solar panels can be effective alternatives to south-

facing installations. East-facing panels are ideal for households with high morning energy use, while west ...
