Photovoltaic panels mptt

Overview

An MPPT (Maximum Power Point Tracking) solar charge controller is an intelligent DC-to-DC converter that constantly finds and harvests the maximum power from your panels, boosting system efficiency and extending battery life, even as weather conditions change. The technique is most commonly used with photovoltaic (PV) solar systems but can also be used with wind turbines, optical power transmission and thermophotovoltaics. PV solar systems have varying relationships to inverter systems, external grids, battery banks, and other electrical loads. Whether you're grid-tied or using battery storage, MPPT adjusts the solar array's electrical operating point to extract the maximum. MPPT is essential in solar power system, ensuring maximum power output from solar panels.
