Power supply mode of energy storage liquid cooling unit

Overview

Liquid-cooled systems utilize a CDU (cooling distribution unit) to directly introduce low-temperature coolant into the battery cells, ensuring precise heat dissipation. Compared to the circuitous path of air cooling, liquid cooling rapidly conducts heat away, not only responding quickly but also. The implications of technology choice are particularly stark when comparing traditional air-cooled energy storage systems and liquid-cooled alternatives, such as the PowerTitan series of products made by Sungrow Power Supply Company.
