PEES Power Systems

Price of IP65 waterproof rating for European island users

Overview

In this 2026 guide, we break down the IP waterproof rating system in clear, practical terms, explaining what each number actually means for dust exposure, splashes, heavy rain, or full water immersion. IP stands for International Protection, and it represents the internationally recognized protection level. IP protection levels are generally composed of two digits or additional letters: the first digit indicates the level of protection against solid objects entering, while the second digit. An IP44 rating means that your product has an IP44 protection from solid particles that are over 1mm in size (protects against most solid objects) and from liquids that are every sprayed or splashed from all directions at a low level of force. With an easy to read IP rating chart and real life examples, this guide helps you choose. This article breaks down the differences between common IP (Ingress Protection) ratings, specifically IP63, IP64, IP65, IP67, and IP68.
