# Price trend of microcrystalline glass photovoltaic panels

## Overview

---

Most industry analyses project a continued downward trend in solar panel prices toward 2030. This is driven by the massive scale-up of manufacturing, falling polysilicon prices, and advancements in cell efficiency. Some forecasts predict prices could be halved from their 2023 levels. The information contained in this site is provided on an “as is”. Note: Costs are expressed in constant 2024 US\$ per watt. Solar photovoltaic module prices refer to the cost of the solar panel itself, and do not include installation or other system. The global PV market is experiencing significant growth, with an anticipated installation of 592 gigawatts of modules in 2024, representing a 33% increase from 2023. However, Polysilicon Supply: Industry-wide polysilicon inventories remain severely overhang, with total polysilicon inventory exceeding 510,000 metric tons and still accumulating. The high prices for M10 PERC and TOPCon cells is based mostly on those of Southeast Asian origins. TOPCon cell. Supply Side: Limited Increment in Q1-2, Concentrated Capacity Release in Q3-4, Estimated New Addition of About 18,000 Tons for the Year. The glass capacity in 2021, 2022, and 2023 was 46,000, 81,000, and 105,000 tons, with a year-on-year increase of 35+%, 70+%, and 30+%.
