## Overview

---

Yes, solar panels can potentially block roof ventilation by reducing space for vents and obstructing airflow with their racking systems. A solar powered roof ventilation system uses the sun's energy to power exhaust fans that remove hot air from your attic. Understanding the. While panels harness sunlight to power your home, poor airflow beneath the roof surface can quietly work against their performance. Once the thermostat detects a buildup of heat and humidity in your attic, it kicks on the fan and removes the stale air via the vent. As the fan operates, it draws.
