Seychelles solar energy storage ratio

Overview

The panel to storage ratio is a crucial consideration when designing solar energy systems. However, renewable energy has been very little tapped so far - the only renewable energy installation being a 4 MW wind farm off Port Victoria and a limited amount of rooftop PV installation. The Seychelles enjoy favourable conditions for renewable energy (RE) resources, such as wind and solar. It will be needed to decarbonise these areas. With tourism contributing over 25% of GDP and diesel generators guzzling \$50 million annually in fuel imports [7], Seychelles faced an energy paradox. Enter the 5MW solar photovoltaic plant with 3.3MWh battery storage. The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the world at a height of 100m.
