Single lithium battery pack overcharge

Overview

Overcharging a lithium-ion battery can cause overheating, explosions, and fires. This raises heat generation and shortens the battery's lifetime. Overcharging any lithium battery may seem unlikely with modern chargers and built-in protection, but when it does happen — whether due. However, if lithium batteries are not handled properly during use, they are easily overcharged, which in turn causes a series of problems. Excessive voltage can lead to various harmful effects.
