Solar inverter before grid connection

Overview

It matches voltage, frequency, and phase to the grid before safely transferring power. An inverter is one of the most important pieces of equipment in a solar energy system. It's a device that converts direct current (DC) electricity, which is what a solar panel generates, to alternating current (AC) electricity, which the electrical grid uses. Grid-tied solar systems allow you to use solar energy during the day, sell excess power back to the utility through net metering, and draw from the. There are two basic approaches to connecting a grid-tied solar panel system, as shown in the wiring diagrams below. The most common is a "LOAD SIDE" connection, made AFTER the main breaker.
