# Solar roof production

## Overview

---

According to our calculations, the average-sized roof can produce about 21,840 kilowatt-hours (kWh) of solar electricity annually—about double the average U. In a perfect world, the average roof in the U. But also, the world isn't perfect. Realistically, your roof's solar generation potential will be less than that. It'll likely still exceed. Estimates the energy production of grid-connected photovoltaic (PV) energy systems throughout the world. It allows homeowners, small building owners, installers and manufacturers to easily develop estimates of the performance of potential PV installations. We use Google Earth imagery to analyze your roof shape and local weather patterns to create a personalized solar plan. 4 million American homes now powered by solar panels. As we enter 2025, technological advances, improved financing options, and strong federal incentives have made rooftop solar more.
