Specification requirements for battery cabinets in weak current room

Overview

The cabinets must be installed in rooms as close as possible to the UPS, dry and with good ventilation, they do not require floors with fireproof coatings. The kg/m² capacity of the floor where the equipment is installed must be considered, in view of the high weight of the. NFPA 70E ®, Standard for Electrical Safety in the Workplace®, Chapter 3 covers special electrical equipment in the workplace and modifies the general requirements of Chapter 1. The chapter covers the additional safety-related work practices necessary to practically safeguard employees against the. The battery rooms must be adequately ventilated to prohibit the build-up of hydrogen gas. During normal operations, off gassing of the batteries is relatively small. The construction characteristics of the recombination type lead-acid electric accumulators (valve-regulated hermetic accumulators); the absence of acid fumes and.
