

## PEES Power Systems

# Standard power scale photovoltaic integrated energy storage cabinet for aquaculture

## Overview

---

This enables real-time energy scheduling, peak shaving, and optimized energy use for both grid and aquaculture needs. Equipped with a robust 15kW hybrid inverter and 35kWh rack-mounted lithium-ion batteries, the system is seamlessly housed in an IP55-rated cabinet for enhanced protection against water. The principle is straightforward: “solar above, fish below.” Floating PV systems generate clean energy while ponds, reservoirs, or salt pans continue to support fish. Using a “fishery-solar hybrid” model, solar panels are deployed above the water to generate clean electricity while enabling aquaculture operations below—achieving efficient dual-purpose land use. Attention should be given to determining the optimal system size to augment. This study presents a standalone photovoltaic (PV)/battery energy storage (BES)-powered water quality monitoring system based on the narrowband internet of things (NB-IoT).
