Syrian oil refinery uses ultra-large capacity solar-powered containers

Overview

Syria has launched construction of a major new oil refinery capable of processing 150,000 barrels per day, signaling a bold step toward rebuilding its war-ravaged energy infrastructure. Syria's largest city was mostly pitch-black, the few speckles of light coming from the other households able to afford solar panels, batteries, or private generators. It was an expensive coping mechanism at the time, but. A quick outlook regarding Syria's energy resources and infrastructure, including the role of declining oil revenue under the Assad regime's governance and the prospects for, and geopolitical impact of, Syrian energy production and trade in a new era. This project is part of Syria's broader strategy to diversify its energy sources and. Interim Energy Minister Mohammad al-Bashir emphasized that while rooftop solar installations are beneficial for individual households, Syria's primary goal is to restore comprehensive electrical networks nationwide. The Syrian government is prioritizing the repair and enhancement of existing.
