## Overview

---

Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. The amount of sunlight that strikes the earth's surface in an hour and a half is enough to handle the entire world's energy consumption for a full year. There are two forms of energy generated from the sun for our use - electricity and heat. Both are generated through the use of solar panels, which range in size from residential rooftops to 'solar farms' stretching over acres of rural. Solar panels An array of solar panels convert sunlight to electricity. Solar panels, also called PV panels, are combined into arrays in a PV system.
