GreenLancer delivers fast, permit-ready plan sets and engineering. **Inverter:** The electricity solar panels produce is in the form of Direct Current (DC). A solar inverter converts the DC power into AC energy to run all appliances in your home or office. **Battery Bank:** It is used to store excess energy and deliver a continuous supply of power at night and during bad. The total output voltage and current of your array are determined by how you connect the individual PV modules to each other and to the solar inverter, charge controller, or portable power station.
