

PEES Power Systems

What does aps mean for solar power generation system

Overview

Arizona Public Service (APS) customers need to complete an interconnection application, submit installation contracts, provide site plans and electrical diagrams, and obtain Permission to Operate (PTO) before activating solar systems. Energy storage is a critical component of Arizona's clean energy future. Our customers now benefit from the integration of large-scale battery energy storage systems connected. APS credits excess solar energy at \$0. APS requires solar homeowners to use Time of Use rates, which results in slightly lower solar savings. The solar interconnection process takes anywhere from one to four weeks with APS. If you have a photovoltaic (PV) system connected to APS and do not have other monitoring of the PV system such as that provided by most inverter manufacturers, it is not easy to determine the solar production. Installing solar panels is a smart move for Arizona Public Service (APS) customers. SouthFace Solar & Electric has been installing residential solar panels in Arizona. Now is the perfect time to harness the power of the sun and take advantage of significant savings through federal and state tax credits.
