Solar panels have a characteristic called the current-voltage (IV) curve, which represents the relationship between the voltage across the panel and the current flowing through it. This curve varies depending on factors such as temperature, shading, and the amount of sunlight received. Power. The power of the Meyer Burger White panel is expressed as 380-400 Watt peak capacity (Wp). The next blurb advertises two different technologies. The higher the nominal power, the greater the energy.
